Abstract

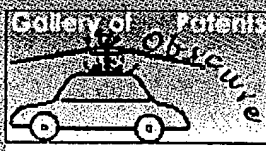

This invention is related to additive calcium lactate roborant for feed and procedure of production, the calcium lactate roborant is a white powder mixture of calcium lactate with calcium phosphate, main components are consisted of calcium lactate, calcium, phosphorus and moisture. Different diseases due to lack of calcium in domestic animal and fowl are treated effectively. The crude materials in this invention are maize, wheat bran and calcium. The calcium lactate is made up through fermenting of microbe, filtering, crystallizing and drying, then a given proportion of calcium phosphate is added into. The organic calcium is made up through mixing and grinding.
